Hello and welcome to my portfolio. My name is Bjorn Verbakel, I am 17 years old, and currently studying ICT & Media Design at Fontys in Eindhoven, The Netherlands. This website functions as a portfolio to show my learning outcomes, and what I have created during the second semester.

Until my fourth year of high school I did not have much experience in programming. This was until we had to make a website for a computer science assignment, where I realized that front-end web development was something I would like to pursue.

I am fascinated with 90's style web design of the old internet, which lead me to creating my portfolio the way it is. Despite its issues and how much of an eyesore some of them were, I think there is something really charming and unique about them that is lost nowadays, especially looking at things like the old GeoCities websites. With my portfolio I tried to recreate this vibe, while still keeping everything visually clear.

My Hobbys

In my free time I enjoy listening to music, playing video games, tinkering with electronics,

Below is described what I have done for the development learning outcome.

Portfolio

For my portfolio, I have developed a website in the form of a retro operating system. I used HTML, CSS, and JavaScript for this purpose. Initially, I considered using a full framework, but I decided to build everything from scratch because I wanted to challenge myself. However, I did adopt the CSS styling of some elements from 98.css and os-gui.js here and there, such as the outer and inset borders, scrollbar, and buttons. To maintain a consistent theme throughout, I styled the content that would typically be on different pages as individual open windows, and the learning outcomes are described in Notepad text files. The website navigation is presented in the form of a File Explorer, where all the content can be found. Important content is also accessible on the desktop and in the Start menu. When you open a window, it will also appear in the taskbar.
